

## Emergency Vehicle Water Systems

### General Description:

EZPack water system is a comprehensive water solution for various situations. It includes an advanced water bladder, with the integral food-graded inner layer, equipped with all the required accessories.

EZPack bladder provides clean and fresh water in any environment. The proprietary food-graded inner layer keeps the water fresh and at drinking condition for many months.

EZPack bladders are ideal for installations in emergency vehicles for water storage. EZPack water storage can be provided in any size, and therefore can fit in various areas inside or outside the vehicle. The EZPack water system can provide water for drinking, cleaning and any other use. The food-graded inner layer keeps the water fresh and clean even at harsh weather conditions.

The following photos illustrate various installation options:

**Technical Description:**

- **Bladders sizes from 12.5 gallons.**
- **Integral tap attached to the bladder.**

- **Food-graded Inner Liner** – the food-graded inner liner assures fresh water for long periods of up to 12 months; no chemical additives are used; can be easily replaced.
- **Durable thermoplastic outer frame** – the outer layer is a heavy duty material, based on reinforced plastic fabric and durable for many years:
  - ✓ Can be laid directly over any ground surface.
  - ✓ The outer hard material protects the inner layer so the water remains safe and clean.
  - ✓ Includes a special opening from the side to change the inner food-graded layer.
  - ✓ UV resistant.
  - ✓ Does not require any maintenance.
  - ✓ Easily folded and stored in small carrying bag.
